

# Crucial® memory is compatible with your system's warranty

Similar to how you can upgrade a system's preinstalled processor or graphics card and choose whichever brand you want, you can also do the same with memory and storage. Under U.S. federal law, you can swap out manufacturer pre-installed components for more cost-effective third-party components and still retain your product's warranty, per section 102(c) of the Magnuson-Moss Warranty Act of 1975 (15 United States Code section 2302(c)). In practical terms, this means you can upgrade to Crucial memory or SSDs without voiding your system's original warranty. Don't just take our word for it, though, when it comes to your system. Here's what the manufacturer warranties say.

**HP®**

Compatible with HP servers and computers

## Micron quality – a higher level of reliability

Server memory that's built to last is built on lasting industry relationships and technology collaboration over multiple product cycles. As a brand of Micron, we work closely with the industry leaders in CPU and platform development, along with the leading server and motherboard manufacturers to enable the channel. The result? Over 35 years of expertise that's poured into die selection, DRAM and PCB design, module assembly, and testing from start to finish. Don't settle for anything less.
